#### Objectives:

- To develop services within and across organisations to identify and meet the diverse needs of cancer survivors
- To work collaboratively across the Network and Health Community involving all organisations caring for cancer survivors: acute providers, primary care, clinical commissioning groups, community services, charitable organisations and service users - to ensure equitable and affordable access to cancer survivorship pathways across primary, secondary, tertiary, community and third sectors.
- To develop a work programme to support specific interventions such as health needs assessments, end of treatment summaries and health & well-being clinics – promoting and sharing best practice
- To provide local services where possible and practical and centralised services where necessary
- To develop the necessary IT structure across the network which supports the survivorship pathway and can be accessed by primary and secondary care, including a patient portal
- To work with commissioners and Trusts to develop a sustainable financial model to support the new pathways
- To identify and advise on metrics for performance
- To develop a source of information for services available for cancer survivors
- To report regularly on progress to the strategic clinical network

## **Membership**
